CULTIVATING LEARNING AND SAFE ENVIRONMENTS

An Empirical Study of Prevalence and Perceptions of Sexual Harassment, Stalking, Dating/Domestic Abuse and Violence, and Unwanted Sexual Contact

The University of Texas at Tyler

Spring 2017

The successful launch and timely completion of the Cultivating Learning and Safe Environments (CLASE) Survey at The University of Texas at Tyler is due in large part to the collective effort and dedication of many individuals. The CLASE survey is part of the larger empirical CLASE study of prevalence and perpetration of five forms of violence and misconduct including sexual harassment by faculty/staff, sexual harassment by students, stalking, dating/domestic abuse and violence, and unwanted sexual contact across 13 institutions in The University of Texas System. The research also includes focused analysis with professionals at rotating campuses and an innovative multi-year cohort study to assess impact and program outcomes at The University of Texas at Austin.

First, the research team and the university community owe an immense debt of gratitude to all student participants. We understand more about our students’ lives because they took the time to complete this survey. We are particularly grateful to the survivors of sexual harassment, stalking, dating/domestic abuse and violence, and unwanted sexual contact. Survivors’ contributions were especially critical to move program and response policies forward, so our hope is that the findings are reflective of their experiences.

Chancellor William McRaven is a transformative leader. With the support of the UT Board of Regents, the Chancellor’s vision has been to recognize all forms of violence that our students experience and implement strategies toward pioneering solutions. It has been a privilege to be a part of this noble charge.

We want to thank and extend our gratitude to UT Tyler President Rodney Mabry, for engaging students and the campus community in the deepest understanding and strategies of these issues to ensure the safety and academic achievement of all students. His leadership is commendable.

We would like to extend our heartfelt thanks to Dr. Wanda Mercer, associate vice chancellor for student affairs at the UT System Office of Academic Affairs. Dr. Mercer was our on-the-ground leader, expertly assisting this team through the labyrinth of institutions of higher education. Undoubtedly, the CLASE project would have been unachievable without Dr. Mercer’s aptitude and commitment.

Our gratitude and appreciation goes out to UT Tyler CLASE Stakeholder Group Chair Title IX Coordinator Blake Bumbard, along with fellow members Assistant Director Ben Carter, Executive Director Beverley Golden, Associate Dean Kim Harvey-Livingston, Director Dave Hill, Title...

IX Investigator Elizabeth McMinn, Chief Mike Medders, and Assistant Vice President Ona Tolliver, for their commitment and tireless energy developing recruitment and promotional efforts that led to a successful fall survey launch.

Chris Kaiser, director of public policy for the Texas Association Against Sexual Assault (TAASA), and Aaron Setliff, director of public policy for the Texas Council on Family Violence (TCFV) receive our immense gratitude for their superb legal prowess and guidance.

For the past two years, we have deepened our strong relationship with the UT System Office of the Director of Police under the leadership of Director Mike Heidingsfield. Thank you for putting police efforts at the center of prevention and change efforts on our campuses.

We wish to thank Lope Gutierrez-Ruiz, Michelle Benaim Steiner, and the team at In-House International for their incredible creative work on this report. Hundreds of hours went into these reports, and we owe them a great debt for their commitment to illustrate these important data with such care.

We wish to give a big shout out to all the energetic and passionate students who helped with recruitment, pilot pre-testing, and survey promotion through social media.

IDVSA graduate research assistants Michelle “Chelly” Calandra and McKenna Talley worked tirelessly to develop this report.

We have stood on the broad shoulders of a large community of sexual assault and violence researchers and colleagues that willingly shared their survey tools and consulted with us. We are deeply appreciative for their commitment and generosity.
Enrolled undergraduate and graduate students were randomly selected to participate in the study. Students anonymously and voluntarily answered questions using a web-based platform in three broad areas: health and well-being, general perceptions about the institution’s response to addressing four areas protected under Title IX legislation (sexual harassment, stalking, dating/domestic abuse and violence, and unwanted sexual contact), and if they had personal experience with any of these since their enrollment at a UT System institution. At UT Tyler, 1,149 students participated. The response rate was 13.7%.

Sexual harassment, stalking, dating/domestic abuse and violence, and unwanted sexual contact are pervasive societal issues. Research indicates that college-aged students may be at particular risk for victimization, and institutions of higher education (IHEs) have a moral and legal responsibility to implement strategies that minimize risks for their students. The UT System and its institutional leaders have set the goal to do just that—further understand, address, and work to eliminate these acts by continuing to dedicate and commit significant institutional efforts and resources. It is equally important to recognize that these issues are not unique to IHEs, but are social problems that
Executive Summary

should be viewed in the larger societal context.

Race/Ethnicity —
The UT System is uniquely positioned to further contribute to the understanding of the impact these forms of violence have on racially and ethnically diverse student populations, particularly Hispanic and Latino/a students. Findings do not explore the intersectionality of race/ethnicity and sexual harassment, stalking, dating/domestic abuse and violence, and unwanted sexual contact. The CLASE project will work toward these aims in the future.

Complex accountability for institutions of higher education —
In recent years, universities nationwide have been grappling with how to identify and respond to victims and hold perpetrators accountable. However, in university settings, striking the balance of justice for victims and accountability of the alleged offenders is more complex, particularly when the offender has been identified as another student. University actors have a duty to uphold the liberties of all their students (victims and alleged offenders). University actors also have a duty to address the needs of all their students in a system where there are both Title IX and criminal justice process reporting options. Research indicates formal reporting is incredibly complex for victims, because it is most likely that the victim and alleged offender know, have known, or are related to each other.

Nationally, university actors need more support and resources dedicated to the implementation of disciplinary processes, police investigations, an advanced understanding of Title IX legislation and processes, and student support services.

Title IX Forms of Violence

Title IX is the Education Amendment of 1972 that states, “No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance.”

Some forms of violence are prohibited types of sex discrimination under Title IX. These forms of violence include sexual harassment, stalking, dating/domestic violence, and sexual assault.

This report uses the term “unwanted sexual contact” to include unwanted sexual touching, attempted rape, and rape. These particular forms of violence are often referred to as “sexual assault” within the context of federal and state statutes.

This research seeks to contribute to UT System institutions’ understanding of these issues.

Report Organization

This report is organized into five major sections.

Part 1: Introduction gives background information about the CLASE project, including its methodology,

Part 2: Findings includes 18 infographics illustrating the prevalence rates, related impact, and students’ perceptions of institutional response,
Executive Summary

Why use CLASE statistics?

There are several reasons why the findings in this report and statistics from other studies may differ. Definitions of victimization vary; the CLASE project uses behaviorally-specific definitions focused on unwanted, nonconsensual behaviors. Behaviorally specific definitions result in more accurate reports of victimization than asking a person if they were sexually harassed, stalked, abused, or sexually assaulted.

Second, the study’s scope is limited to the issues protected under Title IX and queries students about their experiences since enrollment at a UT System institution.

Finally, prevalence data are not limited to formal reports to institutional services such as campus police or health centers. Research indicates that the topics under study are among the most underreported crimes in the United States. In Texas, only nine percent of adult sexual assault victims reported their victimization to law enforcement.

What we have produced is a current, representative, and UT System Institutions-specific study of the prevalence of forms of violence under Title IX.

Clery Statistics

The Clery Act is a federal statute that requires both private and public IHEs that participate in federal financial aid programs to disclose information about crime on and around their campuses in an Annual Security Report (ASR). The Department of Education defines what crimes are reported in the ASR, which include several non-sexual misconduct related crimes and also the sexual misconduct related crimes of (1) dating violence, (2) domestic violence, (3) sexual assault (rape, fondling, incest, statutory rape), and (4) stalking.

In addition to the sexual misconduct crimes reported under Clery, the CLASE report also addresses: (1) sexual harassment (sexist gender harassment, crude sexual harassment, unwanted sexual attention harassment, sexual coercion harassment) and (2) cyber abuse and psychological abuse in the dating/domestic violence context. Under Clery, a crime is “reported” when it is brought to the attention of a campus security authority (CSA), the institution’s police department or campus safety office, or local law enforcement personnel by a victim, witness, other third party or even the offender.

Reports can be made by anyone, including non-affiliates of the institution. As not all crimes are reported to a CSA, the institution is limited to reporting in the ASR only those crimes of which it is made aware.

The institution is also limited to reporting in the ASR offenses that occur (1) on campus, (2) on public property within or immediately adjacent to the campus; and (3) in or on non-campus buildings or property that the institution owns or controls. The CLASE report does not have geographic limits and it does not focus on formal reports to the institution, rather its focus is on students’ experiences.

Part 3: Current Programs summarizes the current institutional efforts to address sexual harassment, stalking, dating/domestic abuse and violence, and unwanted sexual contact,

Part 4: Next Steps describes initiatives, strategic actions, and priorities; and
Part 5: Additional Information includes appendices that provide supplemental data and findings.

Impetus for Leadership-Driven Policy Efforts

The UT System and its institutions recognize that sexual harassment, stalking, dating/domestic abuse and violence, and unwanted sexual contact deeply affect students’ abilities to learn, grow, thrive, and achieve their educational goals while attending college. The UT System, as a leader in the State of Texas and the nation, strives to understand, address, and reduce these forms of violence across its institutions with the goal to eventually eliminate them. In May 2015, at the initiative of Chancellor William H. McRaven and with the full support of the UT System Board of Regents, researchers at the Institute on Domestic Violence & Sexual Assault (IDVSA) at the School of Social Work at The University of Texas at Austin developed and implemented the four-year CLASE research study. The CLASE project was funded by The University of Texas System Board of Regents.

Federal legislation, mandatory legal regulations, and the creation of the White House Task Force to Protect Students from Sexual Assault also brought these issues to the public's attention. The Task Force’s first report, Not Alone, identified priority areas for research, including the critical role of benchmarking surveys to assess efforts that build on knowledge and improve prevention and intervention undertakings. IDVSA researchers have been a part of all these efforts.

See www.utsystem.edu/CLASE for a full description of the CLASE Project.

Literature Review

The four issues under study are briefly outlined particularly in the context of higher education.

Sexual harassment —

Sexual harassment is defined as “unwelcome sexual advances, requests for sexual favors, and other verbal or physical harassment of a sexual nature when such conduct has the purpose or effect of unreasonably interfering with an individual’s academic or work performance or creating a hostile environment”. In this report, we include gender harassment (unwanted sexist behavior) within sexual harassment since Title IX protection extends to students who experience gender harassment or sexual harassment. Sexual harassment of students at IHEs is well-documented in the literature and continues to be affirmed by the recent results of campus climate surveys across the United States.

Recent campus climate surveys have found rates of faculty/staff-perpetrated sexual harassment ranging from 21% to 38% with variation in victimization rates among students of different genders and classifications in school. Rates of student-perpetrated sexual harassment have ranged from 39% to 64.5%, with similar variation (See Appendix A, Table 1). While undergraduate students indicate higher rates of sexual harassment perpetrated by their peers than do graduate and professional students, graduate and professional students indicate higher rates of sexual harassment perpetrated by a faculty or staff member than do undergraduate students. The difference in perpetration details and school classification may occur due to a greater amount of interaction with faculty and staff in
graduate and professional programs, as well as the inherent nature of power differentials in student-teacher relationships. Gaps may also be reflected in the information available about undergraduate prevalence rates of sexual harassment perpetrated by faculty or staff.

However, methodological and measurement approaches across national studies make exact comparisons about these issues difficult. Appendix A provides a summary of two other national studies for contrast and methodological differences are noted.

Stalking —
Stalking is defined as the “persistent [use of] threatening or harassing tactics” that are unwanted and fear-inducing, such as being followed, spied on, or sent repeated unwanted messages. Recent research at IHEs found that stalking prevalence rates range from 2.9% to 26%, with higher rates typically experienced by undergraduates and female students. CLASE stalking prevalence rates are comparable to prevalence rates across US institutions Appendix A provides additional comparison data.

Dating/domestic abuse and violence —
The Department of Justice (DOJ) defines dating/domestic abuse and violence “as a pattern of abusive behavior” committed “by the victim’s current or former spouse, current or former cohabitant, or person similarly situated under domestic or family violence law;” partners in a non-marital romantic or intimate relationship are also included. Prevalence rates vary across studies due, in part, to diverse methodological practices. Recent research at IHEs indicated that students experience dating/domestic violence at rates of 4.9% to 11.5%. The CLASE study included psychological abuse, cyber abuse, and physical violence victimization as measures of dating and dating/domestic violence. Methodological and measurement approaches across national studies make exact comparisons across prevalence rates difficult.

The high rates of disclosure among men are surprising, although not without precedent; several studies indicate that male and female college students report experiencing dating/domestic abuse and violence at similar rates. What is also known is that the consequences or impact of this abuse and violence is often greater for women, who are more likely to experience emotional consequences and severe injuries. For example, in the CLASE study, women reported higher rates of injuries that needed medical treatment, problems with school, and serious emotional difficulties. Women's violence also tends to be a protective behavior used in response to violence initiated by an abusive, intimate partner; a strong predictor of women's violence is men's violence against them. The inability to measure the intent, including self-defense and coercive control as describe above, are limitations of behaviorally-specific measures.

Yet, men's dating/domestic abuse and violence rates are concerning. Findings indicate that both male and female students are harming one another at troubling rates during the particularly important young-adulthood developmental stage. No physical violence perpetrated against anyone is tolerable. Societal pressures and expectations may also mean that women face fewer social barriers to reporting than do men. This research area needs further investigation to fully appreciate the findings and
develop programs and services that respond to all students’ needs.

**Unwanted sexual contact —**

Unwanted sexual contact is defined as sexual activity that occurs without consent. Title IX legislation defines sexual violence as any “physical sexual act perpetrated against a person’s will or where a person is incapable of giving consent (e.g., due to the student’s age or use of drugs or alcohol, or because an intellectual or other disability prevents the student from having the capacity to give consent).” Prevalence rates of unwanted sexual contact in the CLASE study are comparable to rates at other IHEs nationwide. Rates of unwanted sexual contact vary widely by gender and classification. In several recent studies, rates of unwanted sexual contact victimization among undergraduate females ranged from 21% to 31%, while rates among graduate males ranged from 1.1% to 5%. Unwanted sexual contact prevalence rates at UT System institutions are similar to rates at other IHEs.

**Comparing national prevalence rates —**

Methodological and measurement approaches across national studies make exact comparisons about these issues difficult. Appendix A provides a summary of two national studies for contrast and methodological differences are noted.

**Methodology**

The CLASE project aimed to better understand students’ experiences of sexual harassment, stalking, dating/domestic abuse and violence, and unwanted sexual contact and enhance existing programs and services for students. The CLASE project is an innovative and comprehensive study about the issues protected under Title IX legislation and their impact on students’ physical, mental, and financial lives. Its revolutionary aspects are marked by the diversity of institutions involved, the multidisciplinary group of stakeholders engaged, the scientific rigor of the methodology, and the use of findings to inform institutional practice and policies for immediate and innovative change.

The larger CLASE project consists of three parts: 1) a web-based survey, 2) an in-depth empirical investigation phased in with all institutions across four years, and 3) a four-year cohort study at UT Austin. Only the web-based survey findings of prevalence and perceptions are reported in this document. Data collection is ongoing in Parts 2 and 3 mentioned above and new reports will be produced once additional UT System institutions have participated in an in-depth empirical investigation and the cohort study.

**Guiding research questions —**

Three research questions guided the CLASE survey.

1. What is the prevalence and rate of sexual harassment, stalking, dating/domestic abuse and violence, and unwanted sexual contact of students since their enrollment at a UT System institution?

2. What are the students’ perceptions of institutional responses to these issues?

3. How do UT System institutions use findings to enhance existing programs and services and identify next steps?
Executive Summary

Survey instrument development, confidentiality, and Institutional Review Board (IRB) process —

The web-based survey contained 20 modules that included questions about general demographics, health and well-being, alcohol consumption, perceptions of safety, and several other areas. Students were also asked behaviorally-specific questions about their experiences in the four areas protected under Title IX (sexual harassment, stalking, dating/domestic abuse and violence, and unwanted sexual contact) since their enrollment as a student at the institution.

A random sample was selected of all currently enrolled, eligible students. The sample size was based on criteria that ensured adequate power to accurately assess the prevalence of issues protected under Title IX legislation and to accommodate three survey versions. Students ages 18 or older voluntarily and anonymously participated and the survey was structured to protect their confidentiality and privacy. All data were kept on a secure server. The IRB at UT Austin reviewed and approved this project (IRB approval No. 2015-09-0110) and served as the IRB of record.

Interpreting percentages and the number of survey participants —

Research reports that present findings as percentages often include the overall number of participants to provide more context for the reader. For example, “18% of students experience sexual assault” might be more useful if the overall number of students at the institution is also included when reporting the percentage. In the infographic reports, several factors led to the decision to be parsimonious so that they contain only percentages. The overall population of students and number of survey participants are known and reported in the report’s demographics section. Also, the number of participants for each question and all other relevant data are provided to any interested reader in the “Research Methods Report” and available on the project website: www.utsystem.edu/CLASE.

More importantly, the research team employed the most rigorous and scientific methods available
in survey research, as explained in the Research Methods Report. The margins of error were calculated and reported for all percentages and reliability tests were performed on the instruments. Both strategies add confidence to the reported findings.

The CLASE findings are relevant to all students since their enrollment at UT Tyler, not just those students participating in the study.

Victimization questions —
The CLASE survey was designed to be consistent with the highest standards of scientific rigor and professional best practices in the field. Administrator Researcher Campus Climate Collaborative (ARC3) and Campus Attitudes Towards Safety (CATS) served as the primary web-based survey tools. Both measurements are well-known and broadly referenced. Reliability and validity tests were performed for their use in UT academic institution settings. To increase consistency in participants’ understandings of the meaning of each question, the survey instruments consist of behaviorally-specific questions. The table below outlines the behaviors measured in the survey. The CLASE tool is outlined on page 15.

For the complete copy of the CLASE web-based survey see the Research Methods Report.

Institutional stakeholder group collaborations —
The CLASE project was implemented with the involvement of an Institutional Stakeholder Group at every institution. The Institutional Stakeholder Group included representatives from the administration, faculty, staff, and students. The stakeholder group members had the opportunity to provide input and discuss findings. These multidisciplinary partnerships strengthened the project process and outcomes, and were reflective of the project’s value to be inclusive and culturally grounded.

How was prevalence estimated? —
Criminal justice experts were engaged to define the victimization survey questions that met Title IX legislation violations. Prevalence was defined by the proportion of students enrolled in the UT System who had experienced sexual harassment, stalking, dating/domestic abuse and violence, or unwanted sexual contact victimization since enrollment at a current institution. Sexual harassment, stalking, dating/domestic abuse and violence, and unwanted sexual contact are all violations under Title IX legislation.

See Appendix B and the Research Methods Report for a detailed summary of the study methodology.

Identifying and addressing study limitations —
The study had several limitations. Voluntary surveys may have the potential to reflect response bias because some participants may have answered survey questions either inaccurately or untruthfully due to a misunderstanding or to be socially desirable. In addition, some may assume that students with the experience of victimization are more drawn to this type of study. Three strategies were used to minimize overestimation of victimization. First, the study was not advertised as a study about victimization. Second, weighting strategies were used so that the findings were reflective of
Executive Summary

the student population by gender, race/ethnicity, and school classification at the institution. Third, margins of error were also calculated to reflect relative confidence in the findings.

Behaviorally-specific questions —
Advances in social science have improved the ability to measure victimization over the last decade. Behaviorally-specific questions on surveys more accurately capture participants’ experiences. For example, in the CLASE survey, unwanted sexual contact included unwanted touching, attempted rape, and rape. Students were asked to consider the definition of rape as “since enrollment someone put their penis, fingers, or other objects into my vagina [or butt] without my consent.” Attempted rape was defined as “even though it didn’t happen, someone TRIED to have oral, anal, or [vaginal] sex with me without my consent.”

Snapshot vs. cumulative view —
Survey research has other limitations. A survey is a snapshot that provides a relatively simplified picture of the issue under study. In the CLASE study, the findings may miss two important aspects about students’ lives. First, the findings do not necessarily fully account for the context or impact of these issues in a student’s life. Second, a single survey is not able to fully assess how these issues evolve over time, so a lifetime measure might be considered more accurate. For example, a freshman enrolled at a UT System institution who did not report being victimized during her or his first year may experience a victimization by graduation. These issues are being mitigated. First, during the CLASE study, all UT institutions will repeat the web-based survey to more fully understand the cumulative nature of these issues on students’ lives. Second, over the CLASE project, institutions are iteratively involved with in-depth qualitative data collection efforts that will fill in the gaps that may be left unexplored by survey methodology.

A look toward the future —
Prevalence across categories may rise in the future. Although counterintuitive, the upsurge should be considered a signal that the institutional strategies (described in Part 4) are having a positive effect, not that incidents are increasing. Better scientific methods for measuring student experiences, the willingness for students to identify their victimization experiences, and students’ increased trust in their institutional reporting systems are also likely explanations for expected increased prevalence rates. As the issues protected under Title IX legislation are prioritized, the barriers toward students’ success are removed and students’ educational success is more obtainable.

External review —
An external review was used to evaluate the project’s integrity and its scientific rigor. The reviewers were provided draft reports with findings, a detailed methodological report, the data set, copies of the survey, and scoring procedures. The reviewers were asked to answer: a) whether the study met scientific standards, b) whether the findings were consistent with the methods, and c) whether the study answered critical questions for institutions of higher education. The external reviewers concluded that the CLASE study met employed accepted practices for this type of study, high scientific standards of methodological rigor, and that the analysis was consistent with the findings presented in the reports.
**Executive Summary**

*See the External Review Report for additional information.*

**Key Findings**

The following reflects web-based survey findings of students’ experiences since their enrollment at UT Tyler.

**Sexual harassment**
- Nine percent of students reported experiencing faculty/staff-perpetrated sexist gender harassment.
- Seventeen percent of all students reported experiencing student-perpetrated sexual harassment.

**Stalking**
- Eleven percent of students reported experiencing stalking.
- Fifteen percent of female undergraduates reported experiencing stalking.

**Dating/domestic abuse and violence**
- Nine percent of students who had been in a dating or marital relationship while at UT Tyler reported experiencing cyber abuse.
- Eight percent of students who had been in a dating or marital relationship while at UT Tyler reported experiencing physical violence.

**Unwanted sexual contact**
- Eight percent of students reported experiencing unwanted sexual touching.
- Five percent of students reported experiencing rape.

**Vulnerable groups**

It is well documented that LGBTQ+ students are victimized at a rate disproportionate to their population size. While they make up a minority of the student body, they constitute a significant percentage of students who report having experienced victimization. These students’ relatively high victimization rates were strongly indicated in the CLASE study in scientific and practical ways; findings from the CLASE aggregate research, focus group findings, and direct practice with students provide strong evidence about their high disproportionality with regard to victimization. Programmatic and educational gaps for these communities, as well as remedies to strengthen their inclusion and attend to the unique needs of LGBTQ+ victims will be addressed by UT Tyler in current actions and next steps.

**Quick summary of other factors:**

**alcohol involvement, perpetrators, and location**
- Forty-four percent of unwanted sexual contact victims and 76% of unwanted sexual contact perpetrators used alcohol or drugs at the time of victimization, according to victim reports.
- Most instances of dating/domestic abuse and violence and unwanted sexual contact occurred off campus. For example, 92% of physical violence incidents occurred off campus.
- Thirty-two percent of physical violence perpetrators and 38% of unwanted sexual contact perpetrators were identified as students at UT Tyler.
- Sixty-one percent of unwanted sexual contact victims had a close relationship with the perpetrator and 32% were acquaintances.

**Disclosure**
- Twenty-six percent of victims of sexual harassment, stalking, dating/domestic abuse and violence, or unwanted sexual contact disclosed...
the incident(s) to someone prior to taking the survey. Seventy-four percent of victims did not disclose to someone prior to taking the survey.

**Students’ perception of institutional response**
- Many victims (83%) and non-victims (85%) reported feeling safe on campus at UT Tyler.
- Seventy-four percent of victims reported feeling safe from sexual harassment at UT Tyler, compared to 83% of non-victims.
- Many victims (80%) and non-victims (85%) reported believing their institution would take a report of sexual harassment, stalking, dating/domestic abuse and violence, or unwanted sexual contact seriously.

**Additional Reports**

All UT System aggregate and individual institutional reports can be found at: www.utsystem.edu/CLASE

**Current Actions and Next Steps**

UT Tyler offers several programs and services with the goals of reducing violence and ensuring students’ mental and physical safety. For example, UT Tyler’s primary prevention efforts Swoop-in Bystander Intervention training and Peer Advocates for Social Justice training are offered several times throughout the year to train students, faculty, and staff on how to recognize and respond to potentially harmful situations in a way that could positively influence the outcome, creating a “culture of care.” The Institutional Working Group developed a comprehensive list of immediate actions and next steps.

The following includes UT Tyler’s immediate actions. Additional details are found in Section 4.

**Improve perceptions of safety**
- Market and improve utilization of the RAVE Guardian mobile safety app to improve safety.
- Conduct a safety and lighting survey to identify areas of concern on campus.
- Add video cameras with analytical capabilities to enhance safety measures on campus.

**Increase faculty and staff training and involvement**
- Add faculty and staff training to HAVEN, which is currently part of our students’ primary education training.
- Explore ways to reach employees who may be routinely missed, including employees who are part time, adjuncts, graduate assistants, and teaching assistants who may not go through the standard orientation sessions as a condition of employment.

**Address dating/domestic abuse and violence**
- Increase bystander intervention training, including learning to recognize the signs of and intervening with dating abuse.
- Engage student leaders to promote a culture of change from within and ensure campaign is partially student led, by partnering with student organizations such as athletics and Greek life.

**Target outreach to LGBT community**
- Target LGBTQ community by increasing outreach.
- Include LGBTQ population as an area of emphasis within the CLASE qualitative focus groups.
Executive Summary

Target outreach to international student community
• Target international student community by increasing outreach and programming related to interpersonal violence among international students.

Address alcohol and drug use
• Require prevention programming, including HAVEN and Alcohol.edu, our online student training programs. These provide in-depth scenario-based training on issues related to alcohol and drug abuse.
• Expand “Swoop In” bystander intervention training and Training for Intervention Procedure (TIPS) Programs, intervention programs targeted specifically to alcohol use.

Increase accountability
• Develop and administer evaluations to measure proposed changes in order to verify program effectiveness.
Executive Summary

Endnotes

1. The terms employed in this study are used in the context of social science research, and not in their legal context. They are not intended to indicate that the responses of results of the survey constitute or evidence a violation of any federal, state, or local law or policy.
2. The CLASE survey was fielded at 13 University of Texas System institutions in fall 2015 and spring 2016. Across The University of Texas System, 13 of 14 institutions participated. The University of Texas Health Science Center at Tyler enrolls too few students to participate in survey research in a statistically meaningful way and we would be unable to ensure their anonymity.
6. The results of this study are not intended to indicate that Clery Act reportable incidents have been miscounted by the institution or that the institution has otherwise violated the Clery Act.
Executive Summary

1. INTRODUCTION

UT Tyler

Throughout the report student-perpetrated sexual harassment is not divided by subscales; the data were analyzed as one measure.

Stalking did not contain subscales.

D. Follingstad & J. Chahal, University of Kentucky, personal communication, May 19, 2015.
This research study was funded by The University of Texas System Board of Regents. The opinions, findings, and conclusions expressed in this publication are those of the authors and do not necessarily reflect those of The University of Texas System.

More information about this issue available on the next page.
Understanding the Infographic Data

• More than half of students at the University of Texas at Tyler (UT Tyler) identified as female (60%), less than half identified as male (39%), and a small percentage (1%) identified as an additional gender identity.

• Female students comprised 68% of all victims, compared to their representation in the students overall (60%).

• The majority of students identified their sexual orientation as heterosexual (89%). A significant number identified as gay or lesbian (3%), bisexual (4%), or an additional sexual orientation (5%).

• Students identifying as gay, lesbian, bisexual, or an additional sexual orientation made up 19% of victims and 12% of students.

• White Non-Hispanic students made up the majority of students (64%). Hispanic and Latino/a students made up 19% of students and African American students made up 12% of students.

• Sixty-eight percent of victims identified as White Non-Hispanic.

Footnotes

1. The survey originally included nine gender identity categories (Female, Male, Transgender Female, Transgender Male, Genderqueer, Gender Non-Conforming, Intersex, Two Spirit, and I prefer to be called, please specify) and, when possible, rates were calculated on all gender identities. Because of small sample sizes and to protect participants’ anonymity, categories were reported as three gender identities (Female, Male, and Additional Gender Identity).

2. The survey originally included seven sexual orientation categories (Gay, Lesbian, Bisexual, Asexual, Heterosexual, Queer, and A Sexual Orientation Not Listed). Because of small sample sizes and to protect participants’ anonymity, categories were reported as four sexual orientations (Gay or Lesbian, Bisexual, Heterosexual, and Additional Sexual Orientation).

3. Percentage may not equal 100% because of rounding.

4. The survey originally included 11 race/ethnicity categories (White Non-Hispanic, Hispanic or Latino/a, African American, Asian, American Indian/Alaskan Native, Native Hawaiian, Guamanian or Chamorro, Other Pacific Islander, Biracial, and Multiracial). Because of small sample sizes and to protect participants’ anonymity, analyses included six categories (White Non-Hispanic, Hispanic or Latino/a, African American, Asian, Multiracial, and Additional Race/Ethnicity).

5. Percentages may sum to more than 100% because participants could choose from more than one category.

Findings are relevant to the population of students at UT Tyler. The methodology ensures that the estimates provide for statistical confidence and adequate anonymity of study participants. The research methodology report provides details about research design and sampling methodology including the sample size and the related margin of error.

Understanding the Infographic Data

• The largest portion (29%) of undergraduate students were seniors.

• The majority of all students either lived in off-campus non-university sponsored housing (43%) or at home with their parent(s) or guardian(s) (21%).

• Six percent of victims and 8% of students overall reported military affiliation.

• Fifty-one percent of victims and 58% of students were involved in an ongoing romantic relationship at the time of the survey.

Footnotes
1. Percentages may not equal 100% because of rounding.

Findings are relevant to the population of students at UT Tyler. The methodology ensures that the estimates provide for statistical confidence and adequate anonymity of study participants. The research methodology report provides details about research design and sampling methodology including the sample size and the related margin of error.
# Prevalence of Sexual Harassment, Stalking, Dating/Domestic Abuse and Violence, and Unwanted Sexual Contact

**Faculty/Staff-Perpetrated Sexual Harassment**

- Sexist Gender Harassment: 9%
- Crude Sexual Harassment: 4%

Understanding the Infographic Data

• Seventeen percent of all students reported experiencing student-perpetrated sexual harassment since their enrollment at UT Tyler.

• Eleven percent of all students reported experiencing stalking since their enrollment at UT Tyler.

• Eight percent of all students who had been in a dating or marital relationship while at UT Tyler reported experiencing physical violence.

• Eight percent of all students reported experiencing unwanted sexual touching since their enrollment at UT Tyler.

Footnotes

1. The survey used self-report data and asked only about experiences of victimization since participant enrolled at the university.

Findings are relevant to the population of students at UT Tyler. The methodology ensures that the estimates provide for statistical confidence and adequate anonymity of study participants. The research methodology report provides details about research design and sampling methodology including the sample size and the related margin of error.

© 2017 The University of Texas at Austin School of Social Work Institute on Domestic Violence & Sexual Assault
Understanding the Infographic Data

• Six percent of female and 3% of male undergraduate students reported having experienced crude sexual harassment.

• Three percent of undergraduate female students reported having experienced unwanted sexual attention harassment.

Additional Information

These are additional data not presented in the infographic.

• Nine percent of all students reported having experienced sexist gender harassment.

• A very small number (< .1%) of undergraduate students reported having experienced sexual coercion by faculty/staff.

Footnotes

1. The survey used self-report data and asked only about experiences of victimization since participant enrolled at the university.

2. The survey originally included nine gender identity categories and, when possible, rates were calculated on all gender identities. Because of small sample sizes and to protect participants’ anonymity, only Male and Female are displayed here. Information about prevalence among additional gender identity categories can be found in the Academic Aggregate report.

Findings are relevant to the population of students at UT Tyler. The methodology ensures that the estimates provide for statistical confidence and adequate anonymity of study participants. The research methodology report provides details about research design and sampling methodology including the sample size and the related margin of error.
More About Faculty/Staff Sexual Harassment Perpetration¹

<th>%</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>91%</td>
</tr>
<tr>
<td>No</td>
<td>9%</td>
</tr>
</tbody>
</table>
Understanding the Infographic Data

- Men made up 65% of perpetrators of faculty/staff sexual harassment.

- Sixty-nine percent of faculty/staff-harassment perpetrators were faculty, 15% were staff, and 16% were student employees.

- The majority of faculty/staff harassment incidents (91%) occurred on-campus.

Footnotes

1. These analyses are based on questions posed to victims to “recount one victimization since they had enrolled that had the greatest impact on them.” This does not describe all the victimizations reported by students in this survey.

2. The survey originally included nine gender identity categories for perpetration (Female, Male, Transgender Female, Transgender Male, Gender Non-Conforming, Intersex, Two Spirit, and Unknown) and when possible, rates were calculated on all gender identities. Because of small sample sizes and to protect participants’ anonymity, categories were reported as three gender identities (Female, Male, and Unknown). The third category is labeled as “Unknown” because the gender identity of the perpetrator was more often identified as unknown to the victim rather than an additional gender identity, even though additional gender identity is still included in the “Unknown” category.

3. The survey originally provided eight options to define status of perpetrator (Faculty, Staff, Graduate Student Instructor, Teaching Assistant, Graduate Assistant, Research Assistant, Resident Postdoctoral Fellow, and Other, please specify). Six responses had base sizes that were too small to permit separate analysis and were collapsed into “Student Employee” (Graduate Student Instructor, Teaching Assistant, Graduate Assistant, Research Assistant, and Resident Postdoctoral Fellow).

This research was conducted by the CLASE research team at the Institute on Domestic Violence & Sexual Assault and the Bureau for Business Research. Dr. Noel Busch-Armendariz is the IDVSA director and CLASE Principal Investigator.

This research study was funded by The University of Texas System Board of Regents. Institute on Domestic Violence & Sexual Assault

More information about this issue available on the next page.
Understanding the Infographic Data

• Men made up 68% of stalking perpetrators.

• The majority of victims had either a close relationship (28%) or acquaintanceship (47%) with the perpetrator of stalking.

• Half of all stalking incidents occurred on-campus.

Footnotes
1. The survey used self-report data and asked only about experiences of victimization since participant enrolled at the university.

2. The survey originally included nine gender identity categories and, when possible, rates were calculated on all gender identities. Because of small sample sizes and to protect participants’ anonymity, only Male and Female are displayed here. Information about prevalence among those with an additional gender identity can be found in the Academic Aggregate report.

3. These analyses are based on questions posed to victims to “recount one victimization since they had enrolled that had the greatest impact on them.” This does not describe all the victimizations reported by students in this survey.

4. The survey originally included nine gender identity categories for perpetration (Female, Male, Transgender Female, Transgender Male, Gender-queue, Gender Non-Conforming, Intersex, Two Spirit, and Unknown) and when possible, rates were calculated on all gender identities. Because of small sample sizes and to protect participants’ anonymity, categories were reported as three gender identities (Female, Male, and Unknown). The third category is labeled as “Unknown” because the gender identity of the perpetrator was more often identified as unknown to the victim rather than an additional gender identity, even though additional gender identity is still included in the “Unknown” category.

5. Relationship was originally defined in eight mutually exclusive categories (Stranger, Someone I met in the previous 24 hours, Acquaintance, Friend, Romantic Partner, Former Romantic Partner, Relative/Family, and Faculty/Staff). Categories were collapsed into four categories for the analysis (Stranger, Acquaintance, Close Relationship, and Faculty/Staff). Acquaintance includes a person I met in the last 24 hours and a person I know, not considered a friend.

Findings are relevant to all students at UT Tyler.

© 2017 The University of Texas at Austin School of Social Work Institute on Domestic Violence & Sexual Assault

+Extremely low victimization rate

More information about this issue available on the next page.
Understanding the Infographic Data

- Twelve percent of female undergraduates who had been in a dating or marital relationship while at UT Tyler reported having experienced cyber abuse.

- Nine percent of female and 6% of male undergraduate students who had been in a dating or marital relationship while at UT Tyler reported having experienced psychological abuse.

- Eight percent of female and 9% of male undergraduate students who had been in a dating or marital relationship while at UT Tyler reported having experienced physical violence.

Footnotes

1. The survey used self-report data and asked only about experiences of victimization since participant enrolled at the university.

2. The survey originally included nine gender identity categories and, when possible, rates were calculated on all gender identities. Because of small sample sizes and to protect participants’ anonymity, only Male and Female are displayed here. Information about prevalence among additional gender identity categories can be found in the Academic Aggregate report.

Findings are relevant to the population of students at UT Tyler. The methodology ensures that the estimates provide for statistical confidence and adequate anonymity of study participants. The research methodology report provides details about research design and sampling methodology including the sample size and the related margin of error.
More about Dating/Domestic Abuse and Violence Perpetration: Cyber and Psychological Abuse

2. FINDINGS

UT Tyler

More information about this issue available on the next page.
Understanding the Infographic Data

- Sixty-eight percent of cyber abuse perpetrators were male.

- Romantic partners (36%) and former romantic partners (37%) made up the majority of cyber abuse perpetrators.

- Forty-four percent of perpetrators of cyber abuse attended the same school as the victim.

- Seventy percent of psychological abuse perpetrators were male.

- Romantic partners made up 67% of psychological abuse perpetrators.

- The majority of psychological abuse incidents (87%) occurred off-campus.

Footnotes

1. These analyses are based on questions posed to victims to “recount one victimization since they had enrolled that had the greatest impact on them.” This does not describe all the victimizations reported by students in this survey.

2. The survey originally included nine gender identity categories for perpetration (Female, Male, Transgender Female, Transgender Male, Gender-queer, Gender Non-Conforming, Intersex, Two Spirit, and Unknown) and when possible, rates were calculated on all gender identities. Because of small sample sizes and to protect participants’ anonymity, categories were reported as three gender identities (Female, Male, and Unknown). The third category is labeled as “Unknown” because the gender identity of the perpetrator was more often identified as unknown to the victim rather than an additional gender identity, even though additional gender identity is still included in the “Unknown” category.

3. Relationship was originally defined in eight mutually exclusive categories (Stranger, Person I Met in Previous 24 hours, Acquaintance, Friend, Romantic Partner, Former Romantic Partner, Relative/Family, and Faculty/Staff). Categories were collapsed into three relationships (Romantic Partner, Former Romantic Partner, and Other) for the analysis. For cyber abuse, “Other” is mostly friends and acquaintances.

4. Percentage may not equal 100% because of rounding.

**Understanding the Infographic Data**

- Men made up 58% of physical violence perpetrators.
- Sixty-eight percent of physical violence perpetrators were romantic partners of the victim.
- Sixty-four percent of physical violence perpetrators were not students at the same institution.

**Additional Information**

These are additional data not presented in the infographic.

- Among students who experienced physical violence, 65% of female students experienced minor injuries once or more as a result of victimization.
- Among students who experienced physical violence, 65% of female students experienced serious emotional difficulties as a result of victimization.

---

**Footnotes**

1. These analyses are based on questions posed to victims to “recount one victimization since they had enrolled that had the greatest impact on them.” This does not describe all the victimizations reported by students in this survey.

2. The survey originally included nine gender identity categories for perpetration (Female, Male, Transgender Female, Transgender Male, Genderqueer, Gender Non-Conforming, Intersex, Two Spirit, and Unknown) and when possible, rates were calculated on all gender identities. Because of small sample sizes and to protect participants’ anonymity, categories were reported as three gender identities (Female, Male, and Unknown). The third category is labeled as “Unknown” because the gender identity of the perpetrator was more often identified as unknown to the victim rather than an additional gender identity, even though additional gender identity is still included in the “Unknown” category.

3. Percentage may not equal 100% because of rounding.

4. Relationship was originally defined in eight mutually exclusive categories. Categories were collapsed into three categories for the analysis.

5. Percentage may not equal 100% because of rounding.

Undergraduate: The margin of error is ±4% at 95% confidence.

Graduate/Professional: The margin of error is ±5% at 95% confidence.

See Appendix F in the Research Methods Report for more information.

Findings are relevant to all students at UT Tyler.

© 2017 The University of Texas at Austin School of Social Work Institute on Domestic Violence & Sexual Assault

More information about this issue available on the next page.
Understanding the Infographic Data

• Thirteen percent of undergraduate females reported having experienced unwanted sexual touching since their enrollment.

• Six percent of female undergraduates and 4% of male undergraduates reported having experienced rape since their enrollment.

• Four percent of female graduate/professional students reported having experienced rape since their enrollment.

Reporting on Vulnerable Groups

These data were not presented in the infographic; students’ relatively high victimization rates were strongly indicated in other scientific and practical ways and therefore merit reporting as highlights.

• Fifteen percent of bisexual students reported having experienced rape since enrollment.

Footnotes

1. The survey used self-report data and asked only about experiences of victimization since participant enrolled at the university.

2. The survey originally included nine gender identity categories and, when possible, rates were calculated on all gender identities. Because of small sample sizes and to protect participants’ anonymity, only male and female are displayed here. Information about prevalence among additional gender identity categories can be found in the Academic Aggregate report.

Findings are relevant to the population of students at UT Tyler. The methodology ensures that the estimates provide for statistical confidence and adequate anonymity of study participants. The research methodology report provides details about research design and sampling methodology including the sample size and the related margin of error.

This research was conducted by the CLASE research team at the Institute on Domestic Violence & Sexual Assault and the Bureau for Business Research. Dr. Noel Busch-Armendariz is the IDVSA director and CLASE Principal Investigator.

This research study was funded by The University of Texas System Board of Regents. The opinions, findings, and conclusions expressed in this publication are those of the authors and do not necessarily reflect those of The University of Texas System. More About Unwanted Sexual Contact Perpetration

Gender Identity of Perpetrator
- Male: 76%
- Female: 17%
- Unknown: 7%

Relationship to Perpetrator
- Acquaintance: 32%
- Close Relationship: 61%
- Stranger: 7%
- Faculty/Staff: 0%

Was it a student from the same institution?
- Yes: 38%
- No: 55%
- Don't Know: 7%

Did it happen on campus?
- Yes: 20%
- No: 80%

© 2017 The University of Texas at Austin School of Social Work Institute on Domestic Violence & Sexual Assault
Understanding the Infographic Data

• Seventy-six percent of unwanted sexual contact perpetrators were male.

• The majority of victims had a close relationship (61%) with the perpetrator of unwanted sexual contact.

• Fifty-five percent of perpetrators did not attend the same institution as the victim.

• Eighty percent of unwanted sexual contact incidents did not occur on-campus.

Footnotes

1. These analyses are based on questions posed to victims to “recount one victimization since they had enrolled that had the greatest impact on them.” This does not describe all the victimizations reported by students in this survey.

2. The survey originally included nine gender identity categories for perpetration (Female, Male, Transgender Female, Transgender Male, Genderqueer, Gender Non-Conforming, Intersex, Two Spirit, and Unknown) and when possible, rates were calculated on all gender identities. Because of small sample sizes and to protect participants’ anonymity, categories were reported as three gender identities (Female, Male, and Unknown). The third category is labeled as “Unknown” because the gender identity of the perpetrator was more often identified as unknown to the victim rather than an additional gender identity, even though additional gender identity is still included in the “Unknown” category.

3. Relationship was originally defined in eight mutually exclusive categories. Categories were collapsed into four categories for the analysis. Acquaintance includes a person met in the last 24 hours and a person I know, not considered a friend.

This research was conducted by the CLASE research team at the Institute on Domestic Violence & Sexual Assault and the Bureau for Business Research. Dr. Noel Busch-Armendariz is the IDVSA director and CLASE Principal Investigator.

This research study was funded by The University of Texas System Board of Regents. The opinions, findings, and conclusions expressed in this publication are those of the authors and do not necessarily reflect those of The University of Texas System. For questions on this report, please email idvsa@austin.utexas.edu.
Disclosing After Victimization

Did you tell anyone about the incident(s) before the survey?

74% No  26% Yes

When you disclosed, who did you tell?1,2

12% of victims who disclosed told someone at the institution

Green color indicates university services

© 2017 The University of Texas at Austin School of Social Work Institute on Domestic Violence & Sexual Assault
Understanding the Infographic Data

• Seventy-four percent of victims of interpersonal violence did not tell anyone about the incident(s) prior to taking the survey.

• Among victims who disclosed, 69% of victims told a close friend other than a roommate.

• Twenty-seven percent of victims who disclosed told a parent or guardian.

• Twelve percent of disclosing victims accessed at least one UT Tyler service.

• Of victims who disclosed, 4% disclosed to local police.

Footnotes

1. Reports to the following campus departments were lower than 1% and were not reported in the infographic: referral to off-campus East Texas Crisis Center and Swoop In Bystander Intervention program.

2. Percentages may amount to more than 100% because participants could choose from more than one category.

More information about this issue available on the next page.
Understanding the Infographic Data

• Ten percent of victims had to take time off of school after victimization.

• Five percent of victims had to drop school courses after victimization.

• Five percent of victims had to take time off from work after victimization.

• Six percent of victims needed to relocate to another residence after victimization.

Footnotes
1. Participants responded to yes or no questions. Percentages are calculated on yes responses. Responses could be based on any victimization experience endorsed by the participant.

2. Analysis did not allow for clear understanding of the utilization of services after victims determined their needs.
Alcohol and Drug Use at Time of Victimization

Understanding the Infographic Data

- Alcohol/drugs were used by 25% of perpetrators and 9% of victims in psychological abuse cases.

- Alcohol/drugs were used by 34% of perpetrators and 22% of victims in physical violence cases.

- Alcohol/drugs were used by 76% of perpetrators and 44% of victims in unwanted sexual contact cases.

Footnotes
1. These analyses are based on questions posed to victims to "recount one victimization since they had enrolled that had the greatest impact on them." This does not describe all the victimizations reported by students in this survey.

2. We did not measure alcohol and drug use for faculty-staff perpetrated harassment and student-perpetrated harassment.

3. The survey originally included five response categories. The analyses are based on four collapsed categories (I had been using alcohol; I had been using drugs; I had been using both alcohol and drugs; and I had been taking prescription drugs not as prescribed). Data presented include only participants who reported using alcohol and/or drugs.

4. The survey originally included six response categories. The analyses are based on four collapsed categories (They had been using alcohol; They had been using drugs; They had been using both alcohol and drugs; and They had been taking prescription drugs not as prescribed). Data presented include only participants who reported the perpetrator using alcohol and/or drugs.

Findings are relevant to all students at UT Tyler.

© 2017 The University of Texas at Austin School of Social Work Institute on Domestic Violence & Sexual Assault

More information about this issue available on the next page.
Understanding the Infographic Data

•Victims screened positive for depression at four times the rate (28%) of non-victims (7%).

•Victims screened positive for PTSD at more than twice the rate (29%) of non-victims (13%).

•Victims reported higher rates of physical health problems than non-victims. For example, 64% of victims reported sleep problems, compared to 43% of non-victims.

•Victims reported higher rates of weekly alcohol consumption (30%) and binging (13%) than non-victims (22%, 11%).

Footnotes

1. The CLASE survey included validated scales that assess for depression and PTSD symptoms. Participants who are screened positive for depression symptoms and PTSD are displayed according to the scoring criteria associated with the original scales are displayed.

2. A drink is defined as half an ounce of alcohol equivalent to a 12-ounce can or glass of beer or cooler, a 5-ounce glass of wine, or a drink containing one shot of liquor. Binge drinking was defined as having five or more (if you are male) or four or more (if you are female) drinks containing any kind of alcohol on one occasion.

3. Participants responded to questions based on 11 categories. Analyses are based on reporting into five collapsed categories (Never: I never drank any alcohol in my life/I did not drink since enrolling; Less than monthly: 1 or 2 times per year/3 to 11 times per year; Monthly: Once a month/2 to 3 times a month; Weekly: Once a week/Twice a week/3 to 4 times a week/5 to 6 times a week; and Daily: Every day). Percentages are calculated on Weekly responses.

Findings are relevant to the population of students at UT Tyler. The methodology ensures that the estimates provide for statistical confidence and adequate anonymity of study participants. The research methodology report provides details about research design and sampling methodology including the sample size and the related margin of error.

There is something I can do about sexual violence on this campus.

Findings are relevant to all students at UT Tyler.

© 2017 The University of Texas at Austin School of Social Work
Institute on Domestic Violence & Sexual Assault

More information about this issue available on the next page.
Understanding the Infographic Data

- Fifty-eight percent of non-victims and 55% of victims reported feeling safe walking across campus at night.

- Sixty-one percent of both victims and non-victims reported feeling safe attending off-campus non-university sponsored events.

- Twenty-eight percent of victims compared to 11% of non-victims reported believing that sexual violence is a problem on campus.

- Sixty-seven percent of victims and 80% of non-victims reported feeling safe from stalking on campus.

Footnotes

1. Participants responded to questions based on a 5-point scale (Strongly Disagree, Disagree, Neutral, Agree, Strongly Agree). Analyses are based on analysis of participants who Strongly Agree or Agree.

2. Participants responded to questions based on a 5-point scale (Strongly Disagree, Disagree, Neutral, Agree, Strongly Agree). Four analyses are based on reporting into one collapsed category (Strongly Agree/Agree) and two analyses are based on reporting into one collapsed category (Strongly Disagree/Disagree).

3. Participants responded to questions about perception of safety surrounding victimization on or around campus.

4. Participants were asked to state if “On or around this campus, I feel safe from sexual violence.” Sexual violence is used instead of unwanted sexual contact to honor participant endorsement of a perception related specifically to the term sexual violence.

Findings are relevant to the population of students at UT Tyler. The methodology ensures that the estimates provide for statistical confidence and adequate anonymity of study participants. The research methodology report provides details about research design and sampling methodology including the sample size and the related margin of error.

3. Current Programs
Current Programs

UT Tyler Campus Response, Prevention Efforts, and Resources to Address Sexual Harassment, Stalking, Dating/Domestic Abuse and Violence, and Unwanted Sexual Contact.

Supportive Services

Student Health and Wellness
Provides a variety of programs and training for Title IX related issues. Visit https://www.uttyler.edu/wellness/ for information.

Behavior Intervention Team
BIT identifies and addresses concerning behavior and provides resources for students. Visit http://www.uttyler.edu/studentaffairs/concerns.php for information.

RAVE Patriot Guardian App
Provided through the UT Tyler Police Department, free personal safety app for students, available on mobile devices.

East Texas Crisis Center (ETCC)
Crisis intervention and advocacy services are available for victims of interpersonal violence and sexual assault. For the 24-hour crisis hotline contact (903)595-5591. Visit http://etcc.org/contact-us/ or contact (903)509-2526 for information.

Confidential Resources and Reporting
University Counseling Center Provides confidential, free counseling to students in need. For information contact (903) 566-7254 (8 am to 5 pm). For the 24/7 Crisis Hotline contact (903) 566-7254. Visit http://www.uttyler.edu/counseling/ for information.

University Health Clinic
The Health Clinic is dedicated to providing the highest quality treatment and care to students, faculty, and staff (Monday-Friday, 8 am to 5 pm). Confidential services include general medical care, women's wellness, health education, immunizations, laboratory, and lab work. Contact (903)939-7870 or visit https://www.uttyler.edu/clinic/ for information.

Silent Witness Program
Students can make a confidential report of a crime (NOT intended to report crimes in progress) to UT

**Coordinated Response**

**Office of Compliance**
The Office of Compliance’s mission is to “help build compliance consciousness into the environment at UT Tyler.” Duties include providing compliance training, including compliance related to sexual harassment and assault and other forms of violence on campus, and performing Quality Assurance Reviews. Visit https://www.uttyle.edu/compliance/ for information.

**Title IX Coordinator and Investigators**
The Title IX Coordinator, Deputy Coordinators, and Investigators are tasked with monitoring Title IX compliance and responding to complaints. Visit https://www.uttyle.edu/titleix/ for information.

**UT Tyler Police Department**
UTTPD’s mission is to “provide an environment in which the university community can live, study, and work without fear.” Visit https://www.uttyle.edu/police/mission.php for information.

**Professional Training**

**Compliance Training for Faculty, Staff, and Student Employees**
New Employee Orientation Mandatory orientation for all new full-time staff including information on Title IX.

**Faculty/Staff Compliance Modules**
Online training compliance modules on UT Tyler policies, designed to be completed bi-annually.

**Student Employee Orientation**
Includes information about crisis management, Title IX, and bystander intervention.

**Fitness Center Student Staff Training**
Training for student employees of the Herrington Patriot Center (HPC), university fitness center.

**Resident Advisor Training**
Resident Life employees are trained each semester in crisis intervention, Title IX recognition and reporting, and Quick Response Plan (QRP).

**Athletic Staff Training**
Sexual assault training for athletics department coaches and staff.

**Awareness, Prevention, and Educational Efforts**

**Student Orientations**
Mandatory orientations for incoming students, including new students, transfer students, graduate students, international students, and students entering the College of Pharmacy.

**Haven - Understanding Sexual Assault**
Online program that educates students about the elements of healthy relationships, the importance of sexual consent, and the role of bystanders in creating safe, healthy communities.
Current Programs

Student Organization Training
Training for student organization representatives and advisors regarding risk management.

Greek Life 101 Orientation
Training for fraternity and sorority members, containing information on sexual assault and bystander intervention.

Greek Council Orientation
Training for the Greek Council, including information on sexual assault and bystander intervention.

Student Athlete Training
Training required for all student athletes and held twice per year. Includes information on bystander intervention and consent.

Patriot Money Mentor Training
Student peer financial mentors receive training on suicide prevention, crisis intervention, and Title IX.

Swoop-in Bystander Intervention Training
Training for students, faculty, and staff on how to recognize potentially harmful situations and respond in a way that could positively influence the outcome, creating a “culture of care.” Visit http://www.uttyler.edu/wellness/swoopin.php for information.

Peer Advocates for Social Justice Training
Training held eight times throughout school year to promote primary prevention and bystander intervention among students.

Campus Assault Response Effort (CARE)

Classroom Presentations
Six presentations throughout year are provided on campus safety, bystander intervention, as well as on alcohol, drugs, and health.

Film Series and Panel Discussion
For Sexual Assault Activism Month, presented three films: The Hunting Ground, It Happened Here, and The Mask You Live In, followed by discussion panel.

AXO Candle Light Vigil
Spoke at Candle Light Vigil for victims of domestic assault.

Tabling Events
Table at campus events, including the SGA Sexual Health Fair, Campus Safety Month, and Domestic Violence Awareness Month, to provide information on topics including Financial Abuse Awareness, Sexual Violence (presented in coordination with a campus LGBTQ organization), Safety Within Relationships, Swoop in for Spring Break, and Survivor Stories.
Page was intentionally left blank
4. Next Steps
Next Steps

As a result of the CLASE survey findings, The University of Texas at Tyler has identified priority action items and specific areas for both immediate actions and future steps. These priorities will complement existing initiatives on campus, building a comprehensive network of resources with the goals of advancing safety efforts and enhancing our students’ college learning experience.

Perceptions of Safety

Students’ perception of safety on campus is important to us. We recognize that this perception of safety does not always align with the institution’s actual crime rates, but because perception plays an important role in a student’s experience, we looked at actions we can take to improve in this area.

Our immediate actions to improve perceptions of safety are as follows.

1. Increase mobile app marketing around the use of the RAVE Guardian mobile safety app. One feature of this app is the “Safety Timer” that allows a user to set a time frame; for example, the time it would take to walk across campus at night. Upon safely reaching his/her destination, the user clears the timer. If the user fails to clear the timer within the time frame, an alert can be sent to UPD that will give the GPS location of the student. The app also has other features such as connecting with friends and family acting as guardians, and emergency communication with UPD. The app is currently in use, but we believe a marketing campaign to increase user numbers should be an area of focus for the university. UPD is planning a marketing campaign with the use of flyers that will be handed out at the beginning of this semester when students come to pick up their parking permits. UPD is also marketing another app focused on faculty and staff. Using GPS technology, IAN (Instant Alert Network) functions as a mobile panic button, alerting UPD of specific emergencies.

2. Distribute safety and lighting survey to identify areas of concern on campus. UPD will look at areas requiring more lighting at night, as well as general hazards that may exist walking across
campus. In addition, we are exploring installing sensor lighting technology.

3. Add video cameras with analytical capabilities is being planned to enhance safety measures on campus.

**Faculty and Staff Training and Involvement**

Data from the survey revealed that 10% of students reported being sexually harassed by a faculty/staff member. Faculty and staff currently receive Title IX training at new employee orientation and bi-annually as a module in our compliance training to learn about sexual harassment and university policy. However, we recognize that this is inadequate for the level of awareness that we would like to obtain.

Our immediate actions to increase faculty and staff training and involvement are as follows.

1. Use HAVEN for faculty and staff training, which is currently part of our students’ primary education training.
2. Explore ways to reach employees who may be routinely missed. This includes employees who are part time, adjuncts, graduate assistants, and teaching assistants who may not go through the standard orientation sessions as a condition of employment.

**Dating/Domestic Violence**

The survey findings revealed that dating and domestic violence was the number one category of victimization reported. Although this topic is covered in several areas of our programming, we believe that an organized campaign dedicated solely to dating and domestic violence is warranted.

Our immediate actions to organize a dating/domestic violence campaign are as follows.

1. Increase bystander intervention training to include learning how to recognize the signs of dating abuse and how to intervene. We see a need to include education focused on creating healthy relationships instead of focusing only on the attributes of an unhealthy relationship.
2. Partner with student organizations such as athletics and Greek life so that the campaign is partially student led, engaging student leaders to promote a cultural change from within.

**LGBT Community**

The lesbian, gay, bisexual, transgender, and queer student community at UT Tyler is at particular risk for victimization. As a campus there are a couple of steps we should take to address the safety of our LGBTQ UT Tyler Patriots.

Our immediate actions are as follows.

1. Increase outreach to LGBTQ community.
2. Include this population as an area of emphasis within the CLASE qualitative focus groups.

**International Student Community**

UT Tyler’s international student population has unique needs and risks for victimization that need to be addressed.

An immediate action will be to increase outreach and programming related to interpersonal violence to international students.
Alcohol and Drug Use

The data from the survey confirmed what experts see in the field: alcohol and drug use is a factor in the majority of sexual violence cases.

Our immediate actions to counter the high co-occurrence of alcohol and drug use and sexual violence are as follows.

1. Employ mandatory primary prevention programming. HAVEN and Alcohol.edu, our online student training programs, contain in-depth scenario-based training on issues related to alcohol and drug abuse. Although we have mandated this training in the past, there is no penalty for those students who failed to complete the training, and UT Tyler completion rates were very low. Effective this fall 2016, HAVEN and Alcohol.edu are required for enrolled students. A registration hold will be placed on students who fail to complete the required training.

2. Expand the bystander intervention program, “Swoop In,” and the intervention program targeted specifically to alcohol use, TIPS (Training for Intervention Procedure). Recognizing that primary prevention training alone is insufficient to address the problem of alcohol and drug use, increasing bystander intervention training is necessary to combat the problem.

Increase Accountability

A future step towards increasing accountability is to develop a way to measure proposed changes to verify program effectiveness. Through our preventative efforts and increased programming proposed in our immediate actions, we believe that we will begin to see a change in prevalence of violences and attitudes over time. To hold ourselves accountable for creating measurable change, evaluation is essential.
5. Additional Information
Page was intentionally left blank
### Additional Information

**Appendix A: Comparison of Prevalence Estimates Among Three Institutions of Higher Education Using the Administrator Researcher Campus Climate Collaborative (ARC3) Measure**

Two institutions’ findings were selected for comparison with UT System results. These institutions (Penn State and University of Iowa) were selected based on three criteria: 1) both used the ARC3 survey measurement tool as the primary tool (methodological modifications are noted about how the tool was implemented), 2) students were queried about their experiences since their enrollment across all three institutions, and 3) all three are public institutions of higher education (IHEs).

Methodological differences exist among the studies and readers are cautioned when making direct comparisons among prevalence rates. Main differences include 1) variability in population demographics among the institutions, 2) estimations of prevalence were calculated differently (i.e. the CLASE project uses a Title IX framework, see Appendix B), 3) dating/domestic abuse and violence was measured differently across studies, and 4) findings for faculty/staff-perpetrated sexual harassment, student-perpetrated sexual harassment, and unwanted sexual contact were presented differently.

### Table 1: Faculty/Staff-Perpetrated Sexual Harassment

Table 1 presents the prevalence findings for faculty/staff-perpetrated sexual harassment victimization. Some methodological differences are noted.

<sup>3</sup>Penn State provides overall rates for students reporting rape and/or attempted rape; these rates are not presented separately throughout their report.  

*Prevalence rate only includes incidents which occurred through the use of force or incapacitation.
### Additional Information

**Appendix B: Establishing Prevalence: Title IX, Texas Penal Code, and Student Judicial Services' Code of Conduct**

Prevalence was calculated for victimization measures when single or multiple incidents of behavior(s) were endorsed. Title IX’s “hostile environment” threshold was often met with a single incident. In some cases, multiple incidents of behaviors were needed to create a totality of circumstances to reach the hostile environment claim. In other cases, a behavior could result in a violation if it occurred more than once. This is one example; the full details of the decision-making are outlined in the tables below.

A structured four-step strategy was used to estimate the prevalence and rates.

- **Step 1** involved engaging experts to define which victimization survey questions met any Title IX and/or Texas Penal Code violation.
- **Step 2** included reviewing and excluding any victimization survey questions that did not meet the legal, criminal, and policy criteria outlined in Step 1.

*The purpose of this appendix is to predict the behaviors’ relative potential and circumstantial possibilities of violating federal, state, or local law or policy. It is used in the context of social science research and does not imply that these behaviors, exclusive of context, automatically violate federal law, state law and/or university policy. Actual violations are determined on a case-by-case basis.*
## Additional Information
