

Two Questions

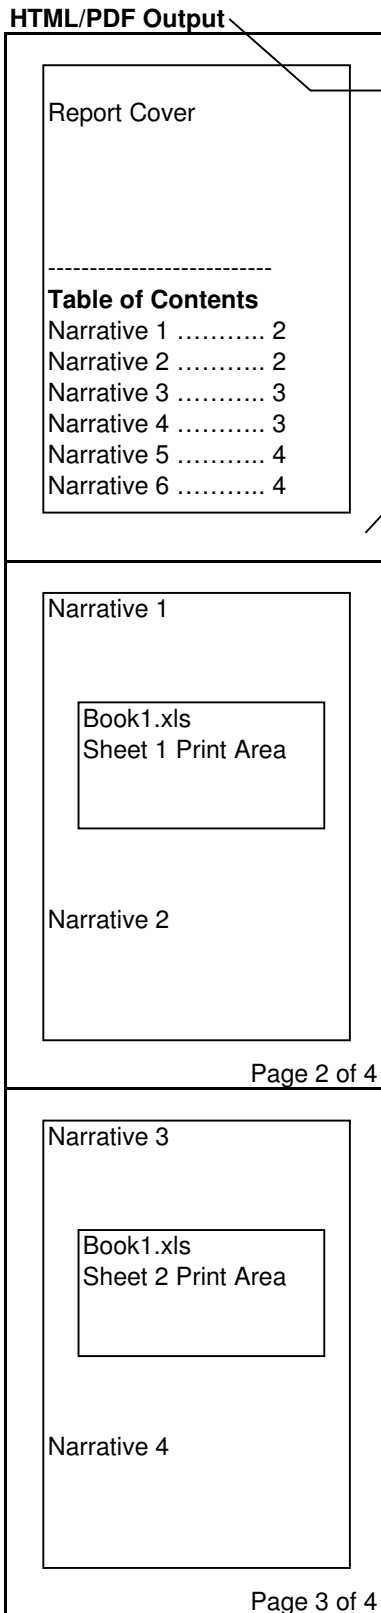

1

Integrate print area of an Excel sheet with Editor HTML/PDF output.

2

Generate Table of Contents and Headers/Footers that start after page 1
(The narrative sections can be long or short, so the page breaks need to be dynamic)

I have a PDF Writer that users can download (from CutePDF). It installs as a printer.

No Footer on cover page. These are formal technical reports, so this functionality is key.

Narrative 5

Book1.xls
Sheet 3 Print Area

Narrative 6
