Overview

The FlowMarker II™ is the industry tool of choice in portable, completely safe, non-residue forming flow visualization tools for electronics, industrial, pharmaceutical, process and scientific experimentation markets.

Sold in 5 configurations for distinct applications, the FlowMarker II™ is used by Fortune 500 companies throughout the world in their product design laboratories, testing facilities, and manufacturing plants.

Certification, as well as test & measurement companies use the FlowMarker II™ as their tool of choice for field work due to its portable nature, extended flow capability, and long residence time.

The FlowMarker II™ is also ideal for customers that are concerned about preventing residue and toxicity left over from testing.

Advantages

- More accurate airflow evaluation
  Detect and “mark” air currents, without creating disturbances.
- Fast
  Visualize turbulence, directionality, and potential dead spots with the touch of a button.
- Eliminates risk of contamination
  Fog is non-toxic, bacteria-free, and breaks down completely into carbon dioxide and water.
- User-friendly
  Lightweight, small, and portable design allows operation in places that are awkward or hard to reach.
- Proven
  Successfully used in a wide range of demanding applications, including pharmaceutical development, electronics cooling, room ventilation, animal cage environments, clean rooms, and wind tunnels.
- Tamper Proof
  Only certified pure FlowMarker™ fluid can be used for refill, providing assurance of contamination-free testing.

From the Airflow Experts

Used in conjunction with degreeC’s precision air velocity sensors, the UAS-series, the Flowmarker II™ is a perfect companion tool to visualize the flow profiles under study.

The FlowMarker II™ comes in its own transport case and contains:

- Flowmarker II™ Device
- Application Tube
- Rechargeable Lead Acid Battery 12V DC
- Battery Charger (International)
- Tool for Removing the Condensate Rings
- 5x Pieces of the Condensate Ring (large)
- 5x Pieces of the Condensate Ring (small)
- 1x Aerosol can of FlowMarker-Fog Fluid
- instruction Sheets: Repair and Tank Overfilling
- MSDS Data Sheet
Accessories

Hydra System

The Hydra System extends the FlowMarker II™ nozzle up to 16 feet from the FlowMarker II™ body. With the fan assisted module, flexible hose, and optional nozzles, the Hydra can deliver fog to remote locations by eliminating the fog condensing unit and technician from the field of testing. The Hydra can also be used in a containment room as an extension of the FlowMarker II™ by quickly moving within a 16 foot radius to check ventilation and airflow gaps in electrical vias.

Remote Control

The remote control system allows the user to set up an experiment, and use a remote control to simply turn fog flow either on or off. This allows hands-free operation for lengthy set-ups, where system parameters need to be modified during flow tests.

Models and Part Numbers

- FlowMarker, complete set
- FlowMarker, including wireless remote
- FlowMarker, complete set, Hydra model (flexible tube is 3 meters)
- Flowmarker, complete set, Hydra model including wireless remote
- Flowmarker-Fog Fluid Canister
