HELP PREVENT MOLD GROWTH

DON'T LET WET ITEMS SIT!
Place a wet shower caddy on a towel when you bring it back to your room (and clean the towel regularly). Hang wet towels and clothes to air dry instead of leaving them piled on furniture or window sills.

CLOSE YOUR WINDOWS!
When air conditioning is running, windows need to be shut for the system to work correctly. If it is raining outside or you leave your room, make sure windows are shut to keep moisture out.

MAKE ROOM FOR VENTILATION!
Keep one foot (1 ft.) of space between any personal items and your cooling/heating unit. Bathroom exhaust fans should always be on while the shower is running and left on for at least twenty (20) minutes after the shower is turned off. Turn on kitchen exhaust fans while cooking, washing dishes or cleaning.

MAKE IT A ROUTINE!
Empty trash and recycling often. Wipe condensation off windows and other surfaces daily. Clean showers and sinks weekly.

REPORT PROMPTLY!
If you observe what you think is mold, report it to facilities management immediately. Submit a work order online or call at (202) 687-3432.
