Our Classrooms are Moving!

Starting in mid July, UC Davis Continuing and Professional Education’s Sacramento classrooms will be moving from the Sutter Square Galleria in Midtown to an amazing new address – One Capitol Mall in Downtown Sacramento.

Our One Capitol Mall classrooms will feature:

- A “Heart of Sacramento” Location – Centrally located, with easy access to downtown and Old Sacramento, I-5, numerous dining options, and a 4-star hotel (Embassy Suites Riverfront Promenade is right across the street)
- Incredible Student Amenities – Including free private gym access and a snack bar.
- An Iconic Building – One Capitol Mall is beautiful, with lots of marble, brass and stunning views of the Capitol and Sacramento River
- Close to Public Transit – One Capitol Mall is close to bus stops and is a 10 minute walk from light rail
- Dedicated Parking – Our students will have dedicated parking spaces in two garages

More details will be posted on our website as they are finalized. If you have any questions, please contact our Student Services team at cpeinfo@ucdavis.edu or (800) 752-0881.

> cpe.ucdavis.edu/free
Business is in a constant process of evolution with the goal of meeting market demand. Your professional education should be, too. We are excited to announce four new or improved programs launching this fall that will offer increased access to and advanced training in a variety of emerging fields both in the greater Sacramento region and beyond.

### Accounting Programs

Our Accounting Program will be rolling out two re-designed certificate programs: Accounting Principles and Accounting Specialist. These programs are designed with flexibility in mind, and provide accelerated pathways to your professional goals. Gain fundamental accounting skills with our Principles program or, if you are interested in focusing on a specific area of accounting, continue your education with the Specialist certificate. Interested in becoming a CPA? Take both programs and get the academic credit needed to sit for the CPA exam.

Learn more about our new accounting programs by visiting [cpe.ucdavis.edu/accounting](http://cpe.ucdavis.edu/accounting).

### Cyber Security Immersion Academy

Cyber Security Immersion Academy is a simulation-based, online program designed to provide students with the core skill set needed to work in the information security field. Learners will be immersed in an authentic simulation environment and must complete the tasks embedded in the context of work as an entry-level employee at a government cyber operations agency. Learning is enhanced by expert mentors who are always available to provide advice and feedback, as well as by discussion and collaboration with peers.

The first course in the three-course program, Cyber Security: Immediate Immersion, runs August 19-September 9 (with a second offering September 23-October 14). For more information about the program and to enroll, visit [cpe.ucdavis.edu/it](http://cpe.ucdavis.edu/it).

### Online Construction Management Courses

The Construction Management program is rolling out new online offerings of our popular classroom-based courses. Curriculum, which will be the same as our in-person courses, will be delivered via the Canvas learning platform in a variety of formats, such as pre-recorded lectures, live webinars and interactive software demonstrations, depending on what the lesson demands. Students can take individual courses, or complete all six and earn a certificate in construction management, gaining the skills and knowledge needed to succeed in this dynamic industry.

Registration for the fall online Construction Law and Contracts course, which begins September 24, is now open. To enroll, please visit [cpe.ucdavis.edu/construction](http://cpe.ucdavis.edu/construction).

### Resiliency

Natural disasters, such as fires, flooding and heatwaves are on the rise in California, creating both singular and chronic stresses on our communities. The human and economic impacts these disasters cause has forced state and local leaders to adapt in how we anticipate, respond to, recover from and thrive in the face of this growing issue. This is resilience.

In response to the need for creating more resilient communities, the Planning and Sustainability Program is launching a series of new resiliency and planning courses. These classes will cover a variety of topics, including the historical aspect of natural disasters in California and our nation, planning approaches, recovery life cycles, state and federal coordination, evacuation considerations for people, pets and livestock and much more.

To learn more about these courses, see pages 10-11 and visit [cpe.ucdavis.edu/planning](http://cpe.ucdavis.edu/planning).
Rebecca N. Bleibaum, instructor and co-founder of UC Davis Continuing and Professional Education’s Applied Sensory and Consumer Science Certificate Program, has been passionate about sensory science since discovering it as a student at UC Davis. Since that time, she has worked alongside pioneers in the field and around the world, focusing on turning academic concepts into applied sensory research. Bleibaum was instrumental in designing course four of the certificate program with the goal of helping other professionals and businesses understand the strategic power of this applied science.

Why is the Applied Sensory and Consumer Science Certificate Program important?

Sensory science is a broad and complex field, with many business applications that can be applied to nearly all products and services. Most universities have one or two courses on sensory science, focusing on basic methods, but spend little time on strategic business application. Our program was the first of its kind to draw on years of applied learning across multiple businesses. Companies send professionals to us to learn how to design product research that readily applies to their business needs. Our program covers a wide gamut of how sensory science tools are used across Fast Moving Consumer Goods (FMCG) industries.

What do you want students to take away from the program?

I want students to understand the valuable role that they can play within an organization if they pursue a career in sensory science. Its applications are broad and it gets to the core of the business strategy. Leadership teams are asking questions about products: “What attributes are important and who is it important to?” Sensory science can help companies identify and measure product parameters that can help build and protect brands.

How will students benefit?

This program provides students with increased confidence in their ability to design, execute, analyze and present research results that matter. They’ve gained an understanding of the diversity of methods in the tool kit and how best to apply them in their unique situations. Even though this is an online program, I have personally met many of our students and have gotten to see first-hand the impact that this program has had on their careers. They think about the field more strategically and many have received promotions as they take on more of a leadership role. Students comment that they now understand not only what they are doing but also why they are doing it.

Why would you encourage someone to get into the sensory science industry?

What I love about sensory science is that every day there is a unique challenge and opportunity. Helping companies understand their products and how to better satisfy consumers, while creating efficient production, is very rewarding. We need more professionals in this field that want to have a direct impact on businesses around the world. Our certificate program opens these opportunities to students and makes them more aware of the industry-wide field and how many people are in it. It’s a growing industry with more positions available than there are people to fill them! Some of these global companies have invested in over 100 consumer scientists that provide valuable product information, many of whom have gone through this program.

Applied Sensory and Consumer Science Certificate Program

- Less than 12 months
- 4 online courses
- $8,925
